Course:
Websites Development Using HTML and CSS

TOPIC: HTML STRUCTURE. FORMATTING TEXT USING HTML

Task 1
Create a page that looks as follows:

Header

HTML is quite simple. At first you might think that it has too many tags. But don't worry. We will get acquainted with them step by step. We will study them in practice and it will help you to remember them all.

Look at the bottom part of the mini browser, you will see the window with tasks. Do them in order to complete the task.

Change the "Header" row to "Let's go!" within the h1. If you did everything correctly, the button "Next task" will be activated.

Task 2
Type the following page in html:

Types of Tags

Each HTML tag has its own meaning and purpose.

Some tags are service ones and you cannot see them on a page.

Other tags *are used* for text formatting and you can **really** see their influence.

For example, if we wrap text in the h1 tag, it becomes bigger and there will be paddings because h1 is a header.
